SUMMARY

I am a Full Stack Python Developer & AI Engineer with 3 years of experience in web development, specializing in both front-end and back-end technologies. Proficient in computer science principles, developing APIs, implementing scalable solutions, and building intelligent chatbots. Experienced in working with Django, Flask, FastAPI, and Golang for backend development, ensuring high-performance applications. I demonstrate attention to detail and adherence to best coding practices. Strong in communication and collaboration with cross-functional teams to deliver high-quality products. Skilled in project management, ensuring timely deployment and providing constructive feedback. Adept at problem-solving, staying updated with industry trends, and collaborating effectively on product development, AI solutions, chatbots, and web architecture. Possesses strong organizational and verbal communication skills and excels in problem-solving and soft skills.

EDUCATION

- Rajkiya Engineering College Mainpuri
Bachelor of Technology , AKTU UP
CGPA (7.57)
August 2018-July 2022
- S J G S S I C Sahunagar Gaderiha, Jaunpur Uttar Pradesh
Class 12th (Intermediate) UP Board
Percentage (79.8)
July 2017-April 2018
- S M P Y U M V M K B Shankar Ganj, Jaunpur Uttar Pradesh
Class 10th (High School) UP Board
Percentage (83.5)
May 2015-April 2016

SKILLS

- Programming Languages & Tools:** Python, Flask, Django, GenAI, OpenAI, Langchain, Streamlit, Hugging Face
Core Java, Spring Boot, HTML, CSS, JavaScript, React JS, Node JS, Express JS, NextJs, Git - (Full Stack Development), Chatbot Development
- API Development:** REST APIs, Microservices, API Integration, FastAPI
- Database Technologies:** SQLAlchemy, MySQL, MongoDB, PostgreSQL, Quadrant Vector Database, FAISS
- Security:** JWT (JSON Web Token), OAuth
- Version Control & Methodology:** Git, GitHub, GitLab, JIRA, Agile Methodologies (Scrum)
- Cloud Technologies:** AWS (EC2, S3, Lambda), Azure (Azure DevOps, App Services, Logic Apps, Azure Functions)
- Machine Learning Libraries:** Pandas, Plotly, Matplotlib, Scikit-Learn, TensorFlow, Keras, OpenCV, Seaborn, PyTorch
- System Design:** Low-Level Design (LLD), High-Level Design (HLD), Scalable Architecture, Design Patterns
- Additional Skills:** Design Patterns, DSA (Data Structures and Algorithms), Streamlit, Spring Batch, Advance Java, Spring Boot, Hibernate, JSP, Servlets, Prompt Engineering, Agentic AI
- GitHub:** <https://github.com/satyamjaysawal>

CERTIFICATION

- [AWS Cloud Practitioner](#)
- [Azure Administration Associate\(AZ 104\)](#)
- [Agile Software Development](#)
- [JSP Servlet JDBC Udemyl Certificate](#)
- [Spring-Batch Processing with Spring-Boot](#)
- [Python PCEP Certificate](#)
- [Python, Flask, andSQLAlchemy](#)
- [Google's Gemini AI with Streamlit](#)
- Certificate course on Enhancing Soft Skills And Personality from NPTEL.

WORK EXPERIENCE

Capgemini-India (Dec 2022-Present)

Project: H&K Holland & Knight - AI Chatbot Development

Role: AI Engineer & Full Stack Developer

- Developed an *AI-powered chatbot* for *Microsoft Teams*, enabling ITSM knowledge retrieval.
- Integrated *Azure OpenAI* for *intent classification* and *content summarization* to enhance response accuracy.
- Built a *data pipeline* to extract and index documents from *SharePoint* using *Azure Cognitive Search*.
- Connected the bot to ServiceNow KB articles via Now Assist Bot Interconnect, delivering formatted responses via adaptive cards.
- Implemented FastAPI, Azure Functions, and CosmosDB for scalable backend services.
- Automated workflows with Azure Logic Apps and utilized Document Intelligence for OCR-based text extraction.
- Integrated Power BI dashboards for monitoring chatbot performance and user engagement.
- Tech Stack:** FastAPI, Azure Functions, CosmosDB, App Service, Unstructured.io, Bot Service, Cognitive Search, Power BI, Logic Apps, Blob Storage, ServiceNow, Document Intelligence, Azure OpenAI, SharePoint.

Skoda Project - AI-Powered Chatbot & Document Processing Suite

Role: User Support & AI Developer

- Developed an AI chatbot using Flask, Streamlit, Azure, and OpenAI API for document analysis, query handling, and intelligent information retrieval.
- Processed diverse file types: PDF, DOC, PPT, TXT, CSV, images (OCR), scanned files via Azure Cognitive Services, Document Intelligence.
- Implemented embedding generation, chunking, tokenization, RAG, and prompt words techniques for accurate knowledge retrieval, contextual responses, and efficient semantic search.
- Built "Ask to Files" for querying documents with summaries, key data, and clauses using FAISS and semantic search; developed "Ask to URL" for structured insights from web pages using BeautifulSoup and NLP pipelines.
- Created a Document Comparison feature for side-by-side analysis; enabled PDF chat, image captioning, entity extraction, and table extraction for multimodal insights.
- Integrated Langchain for advanced prompt engineering, multi-turn conversations, and contextual query flows.
- Ensured secure API design, user access control, and robust error handling.
- **Tech Stack:** Python (Flask), Streamlit, OpenAI API, Langchain, BeautifulSoup, Azure Cognitive Services, Document Intelligence, FAISS, Embedding & Tokenization, Chunking, Retrieval-Augmented Generation (RAG), Prompt Words, NLP Pipelines, Pandas, SQL.

Project: Amplifier Knowledge Mining & GenAIHUB

Role: Python Developer & AI Engineer

- Developed an advanced AI-powered chatbot for Microsoft Teams, enabling ITSM knowledge retrieval, contextual Q&A, multi-turn conversations, and user data access via Microsoft Graph API (Intra ID) authentication.
- Built scalable backend services using FastAPI, Node.js, Azure Functions, CosmosDB, and App Service; frontend built with React.js embedded in Teams.
- Integrated Retrieval-Augmented Generation (RAG) combining Azure Cognitive Search and FAISS for precise knowledge retrieval; fine-tuned BART and T5 models for summarization, intent classification, and QA.
- Leveraged Langchain for prompt orchestration, multi-step reasoning, dynamic API chaining, and context management across SharePoint, ServiceNow, and internal KBs.
- Built a document understanding pipeline using Azure Document Intelligence, OCR, Unstructured.io, and Quadrant Vector DB for processing PDFs, images, and scanned documents.
- Enabled document Q&A, contextual follow-ups, adaptive cards, and integrated Now Assist Bot Interconnect for real-time ServiceNow KB access.
- Automated workflows with Azure Logic Apps for dynamic content refresh and event-driven actions; implemented Microsoft Graph API (Intra ID) for secure authentication, role-based access, and user data retrieval.
- Designed Power BI dashboards to monitor bot performance, user engagement, and model metrics; built a feedback loop system for continuous fine-tuning.
- **Tech Stack:** FastAPI, Node.js, React.js, Azure Functions, CosmosDB, App Service, Blob Storage, Azure Cognitive Search, FAISS, Quadrant Vector DB, Unstructured.io, Langchain, Azure Logic Apps, Document Intelligence, Azure OpenAI (GPT-4, GPT-3.5), BART, T5, SharePoint, Microsoft Graph API (Intra ID), Power BI, ServiceNow.

Project: Liberty Mutual Account

Role: Java Web Application Support and Maintenance

- Provided comprehensive support for a web-based application utilizing *Java, Servlets, JSP, Spring MVC, Spring Boot, and Oracle SQL*.
- Collaborated with the development team to diagnose and resolve issues raised by end-users.
- Implemented bug fixes and enhancements to improve application usability and accommodate changing business requirements.
- Ensured timely resolution of support tickets in adherence to service-level agreements (SLAs).
- Developed custom *Servlets* and *JSP* pages to introduce new features and functionalities.
- Utilized *Spring Core* concepts such as dependency injection to enhance code modularity and maintainability.

PERSONAL PROJECTS

- **E-commerce Platform-**
Developed a full-stack E-commerce platform with FastAPI, Python, React.js, NextJS, Matplotlib, Neon PostgreSQL, SQLAlchemy, NumPy, and Pandas. Implemented JWT-based authentication, a payment gateway, and a chatbot UI for customer support.
 - **Roles & Features:** Customers can browse products, add to cart, purchase via an integrated payment gateway, track orders, and interact with chatbot support. Admins manage users, vendors, product listings, orders, and analyze sales trends with data visualizations using Matplotlib. Vendors can list products, manage inventory, track sales, and receive payments.
 - **Additional Features:** User manual for onboarding, analytics dashboard, and real-time notifications.
[GitHub : https://ecommerce-website-reactjs-vite-frontend.onrender.com](https://ecommerce-website-reactjs-vite-frontend.onrender.com)
- **Multimodal Gemini AI App-**
Built a Python and Streamlit app with AI features: chatbot, image captioning, text embedding, PDF chat, and voice assistant. Added audio and video transcription using Google Generative AI and FAISS. <https://github.com/satyamjaysawal/Multiple-Model-RAG-Usecases.git>
- **MakeMyTrip App-**
Developed a full-stack travel booking app using React.JS, Redux, Node.JS, Express.JS, MongoDB, and Tailwind CSS. Integrated Nodemailer for email notifications and Razorpay for payment processing. Designed APIs for seamless data interaction and used Tailwind CSS for styling. Deployed the application on Vercel for real-time flight and hotel booking. The app includes features like Login, Register, authentication using JSON Web Tokens (JWT), token management, session handling, and cookies. <https://make-my-trip-frontend-shi.vercel.app>
- **CRUD Operation with multiple technologies-**
Developed multiple CRUD system using Angular JS, NextJS, Servlet, JSP, Struts, Spring-Boot, Spring-Security, Spring-Batch, Hibernate, JDBC and MySQL. Integrated Bootstrap for a user-friendly UI. [GitHub](#)

- **MovieFlix - Movie Review & Discovery Platform -**

Developed MovieFlix, a movie discovery platform using Flask, MongoDB, and Pandas for data analysis. Implemented a personalized movie recommendation system based on user preferences and movie genres. Integrated secure user authentication, dynamic search, and review functionalities. Deployed the application on Vercel for seamless scalability. <https://movie-flix-app-dataset.vercel.app/>

- **Personal Portfolio-**

Created a responsive personal portfolio website using HTML, CSS, and JavaScript DOM manipulation. Implemented day and night mode with multiple color templates for the navbar and footer. Incorporated dynamic buttons for enhanced user interaction. Utilized media queries for optimal viewing on different devices. [GitHub : Portfolio](#)
